

DSSI Lab — Website Content Pack

Data Science and System Informatics Lab · University of Georgia

Prepared for Prof. Hongyue Sun · May 31, 2026 · ready-to-paste copy + build/QA guidance

How to use this pack. Each section maps to one page of **dssi-uga.github.io**. Paste the copy as-is. Items in *[brackets]* need your confirmation. The red call-out boxes are build/QA actions. Positioning is full lab-leader framing, as requested.

1. Priority fix checklist

P0 — fix today:

1. **Publications page is still the al-folio demo** — it lists Einstein's 1905–1967 papers. Replace entirely with the real list in §5.
2. **Projects page is generic AI boilerplate** — no real project names, agencies, dollars, or outcomes. Replace with §4.
3. **“Opening” page is empty** — untouched template text + empty calendar. Rebuild as Teaching + Join Us (§7) and rename the nav item.
4. **For members, separate PhD/MS, and undergraduates.** May reduce the head image size.
5. **The website does not look good in Light Mode.** May change the text color.

P1 — high value:

- Add an Alumni section (4 PhD graduates, all now faculty) to People — currently absent (§3). Try to add MS and BS graduates.
- Add a News page with the timeline in §6 to signal momentum.
- Add editorial roles, funding, and society leadership on the Home page (§2, §8).
- Add the missing co-advised postdoc (Qixuan Xiang) and the former undergraduate researchers you listed (§3).

P2 — polish:

- Fix broken links: Home “Contact Us” card points to /about/ (404); Chenyu Xu's LinkedIn URL is malformed.
- Standardize member bios to one voice (third person) and consistent department names.
- Replace “Image coming soon” placeholders on Projects.

2. Home / About page

Hero headline + tagline

DSSI Lab — Trustworthy AI for Advanced Manufacturing

Data Science and System Informatics Lab · University of Georgia, College of Engineering

We build trustworthy, verifiable AI for smart and additive manufacturing — from process modeling, monitoring, and control to privacy-preserving machine learning and safe human–robot collaboration.

Short bio (PI)

Dr. Hongyue Sun is an Associate Professor of Mechanical Engineering at the University of Georgia and Director of the Data Science and System Informatics (DSSI) Lab, where the group develops trustworthy, verifiable AI for advanced and smart manufacturing — spanning additive manufacturing, quality engineering, privacy-preserving machine learning, and safe human–robot collaboration. Dr. Sun's research has attracted over \$9.7M in funding from NSF, USDA, NIOSH, the U.S. Navy, Honda, MxD, and GE. Recognitions include the SME Outstanding Young Manufacturing Engineer Award, the University at Buffalo Exceptional Scholar–Young Investigator Award, and two IISE Transactions Feature Papers. Dr. Sun serves as Associate Editor of IISE Transactions and ASME JCISE, and chaired the INFORMS Quality, Statistics, and Reliability (QSR) Section in 2023-2025. Prior to UGA, Dr. Sun was an Assistant Professor at the University at Buffalo.

Recruitment line (homepage CTA)

The DSSI Lab is recruiting motivated PhD, MS, and undergraduate researchers interested in trustworthy AI for manufacturing, smart and additive manufacturing, privacy-preserving machine learning, and human–robot collaboration. Prospective students: email Dr. Sun (hongyuesun@uga.edu) a CV and a short statement of interest.

Fix: the four homepage cards are good; repoint the “Contact Us → Learn More” card away from /about/ (404) to /people/ or a real contact anchor.

3. People page

Principal Investigator

Dr. Hongyue Sun — Director, DSSI Lab; Associate Professor, Mechanical Engineering

Email: hongyuesun@uga.edu · Office: 1040B I-STEM Complex, Bldg 1 · 302 East Campus Road, Athens, GA 30602 · [Google Scholar](#)

Use the short bio in §2 here, followed by the Awards (§8) and Editorial & Service (§9) blocks. Add a current PI photo.

Current members

Standardized to third person. Confirm each member's exact UGA unit; department labels on the live site are inconsistent.

PhD Students

- **Wuyang Chen** — data-driven modeling of complex multi-stage processes; deep and reinforcement learning, Bayesian optimization, model compression, and privacy-preserving ML.
- **Chenyu Xu** — data modeling and privacy-preserving computation for secure, deployable smart-manufacturing frameworks.
- **Minsung Kang** — responsible AI, algorithmic fairness, and privacy; detection of high-risk 3D-printed components.
- **Nitesh Silwal** — data-driven robotic autonomy and safety in smart manufacturing systems.
- **Bidhek Khatiwada** — robotics, AI, and smart manufacturing; physics-informed digital twins for multi-nozzle direct ink writing.

Postdoctoral Researcher

- **Qixuan Xiang** (co-supervised with Prof. Kenan Song) — Ph.D., Chemical Engineering, Shanghai Jiao Tong University (2025).

Add: Also add current undergraduate researchers already on the roster (Adam Tayara, Vithaal Dhamodharan, Aarush Mathad, Kadin Relefourd, Penuel Yeboah, Zhengyao Liew, John Bodamer, John Braswell, Nehalya Sivakumar).

Alumni

Ph.D. graduates

- **Luis Javier Segura** (Ph.D. 2021) → Assistant Professor, Industrial Engineering, University of Louisville.
- **Sahand Hajifar** (Ph.D. 2022) → Assistant Professor, Information Systems & Business Analytics, Park University (previously Data Scientist, Nielsen).
- **Zebin Li** (Ph.D. 2023) → Assistant Professor, Mechanical Engineering, Penn State Harrisburg (previously Postdoc, UW–Madison).
- **Setareh Kazemi Kheiri** (Ph.D. 2025, co-advised) → Assistant Teaching Professor, Industrial Engineering, University of Pittsburgh.

M.S. graduates

- **Wilson David Jo Siu** (M.S. 2021) → System Analyst, Odoo, San Francisco.

Former undergraduate & pre-college researchers

- **Matthew Rubino** (UB) — STREAM software/AI; 1st place, Agrusa Innovation Competition; ACM SenSys co-author. MS In Cornell.
- **Michelle Weng** (UB) — STREAM software; 1st place, Agrusa; ACM SenSys co-author.
- **Marcus Francisco** (UB) — STREAM hardware; 1st place, Agrusa; ACM SenSys co-author.
- **Brian Przewdziecki** (UB) — STREAM AI group.
- **David Clemente** (UGA) — robotic operations for integrated assembly and 3D scanning.
- **Parker Anderson** (UGA) — advanced manufacturing architecture.
- **Owen Connell** (UGA) — collaborative robotic disassembly; computer vision for task automation.
- **Dawson Gulasa** (UGA) — autonomous robotic inspection; embedded systems.
- **Cade Johns** (UGA) — ethical manufacturing design generation and data collection.
- **Caden Hoang** (UGA) — ethical manufacturing design generation and data collection.
- **Patricio Martinez** (UGA) — ethical manufacturing design generation and data collection.
- **Stella Barraza** (UGA) — human–robot collaborative manufacturing.
- **Carter Boblitz** (Oconee County High School) — robotics in healthcare; co-author on the 2026 ASME MSEC Autoinspector paper.

Fix: standardize bios to third person (several are first person); fix Chenyu Xu's malformed LinkedIn link.

4. Research & Projects page

Research agenda (lead paragraph)

The DSSI Lab's through-line is **trustworthy and verifiable AI for manufacturing**: models and decision pipelines that are accurate, uncertainty-aware, private, and safe enough to deploy on the factory floor. Our work spans four connected thrusts and an emerging frontier in quantum-safe, post-quantum-secure manufacturing.

Research thrusts

- **Smart & additive manufacturing** — process modeling, monitoring, and control for direct ink writing, inkjet printing, biomass manufacturing and other manufacturing processes; multi-stage systems and digital twins.
- **Trustworthy & verifiable AI for manufacturing** — uncertainty quantification, out-of-distribution detection with coverage guarantees, and verified decision chains for high-stakes manufacturing decisions.
- **Safe human–robot collaborative manufacturing** — continuous safety modulation, embodied AI, robotic inspection and disassembly, and occupational-safety analytics from wearable sensing.
- **Privacy-preserving & secure manufacturing** — federated learning, homomorphic encryption and secure multi-party computation, ethical/illegal-product detection, and manufacturing cybersecurity testbeds.
- **Frontier (emerging)** — quantum-safe federated manufacturing and post-quantum-secure decision chains.

Funded projects

Current

Project	Agency · Role	Award	Period
STREAM: cyber-coordinated framework for multi-stage distributed future manufacturing	NSF FMRG · PI	\$2.33M	2021–26
Hybrid cyber-physical testbed for manufacturing security (living lab)	NSF CICI:RSSD · Co-PI	\$600K	2026–29
Ethical Data Science & Digital Twin for active, evidence-based learning	NSF IUSE · PI	\$211K	2025–28
Ethical Industry 4.0: legality, integrity & accountability in digital manufacturing	NSF · PI	\$566K	2023–27
Infrastructure cybersecurity training for the advanced-manufacturing workforce	NSF CyberTraining · Co-PI	\$500K	2023–27
Climate-smart manufacturing	Honda / Honda USA Foundation · PI	\$100K	2025–26
Advanced manufacturing for pecan shelling processing	USDA · Co-PI	\$3.72M	2022–26

Completed (selected)

Project	Agency · Role	Award	Period
Proactive worker safety for Industry 4.0 using AI	MxD / Be Global Safety · Co-PI	\$906K	2024–25
MB.CI: Model-Based Point Cloud Inspection (SBIR Phase I)	U.S. Navy (via GTC) · UGA PI	\$140K	2023–24
Reliability modeling of shoulder fatigue & recovery for warehouse operators	NIOSH · Co-PI	\$361K	2020–23
Testing the Soteria worker safety system	GE Global Research · Co-PI	\$32K	2020

Replace: the live Projects page is five generic “Overview/Approach/Goals/Impact” blocks with no real content and “Image coming soon” on every card. Swap in the thrusts + this project table, and add 1–2 real figures per thrust. **Project page, have sth like Nitesh had for SMOOD**

5. Publications page

Critical: the live page still shows the al-folio demo (Einstein, 1905–1967). Delete it entirely. For al-folio, transcribe the list below into `_bibliography/papers.bib`; the journal list is the priority.

Selected journal articles (reverse chronological). Full list, including 20+ refereed conference proceedings and 50+ presentations, in CV. [Google Scholar](#)

6. News page (new — recommended)

Reverse-chronological; in al-folio each item is a file in **_news/**. Keep entries one line.

- **2026** — PhD student Wuyang Chen named a Finalist for the IISE M&D Best Student Paper Award; the Autoinspector robotic-inspection framework is accepted to ASME MSEC 2026. Awarded a \$600K NSF CICI grant for a manufacturing-security living lab. Dr. Sun serves as an NSF ERC Site Visit Evaluator and CMMI panel reviewer. Zebin secured faculty position. **Add others, such as paper accepted, presentations, pass qualify, new students, new project(s). same to follows. See <https://docs.google.com/document/d/1CwgfWCaU8D4XetMhtlOtPAQZ9Su4oZ3xTA2DgCoOrcc/edit?tab=t.0>. Let's brainstorm for news.**
- **2025** — Dr. Sun served as Chair of the INFORMS QSR Section, awarded a Honda climate-smart manufacturing project; begins as Associate Editor of ASME JCISE; organizes the 2nd Convergent Safety Symposium. Sahand and Setareh secured faculty positions.
- **2024** — Two IISE Transactions Feature Papers; Dr. Sun begins as Associate Editor of IISE Transactions; organizes the 1st Convergent Safety Symposium (30 experts across UGA, UCSD, UT Austin). Ethical Manufacturing competition.
- **2023** — Dr. Sun receives the SME Outstanding Young Manufacturing Engineer Award and UB's Exceptional Scholar–Young Investigator Award, is selected to the NSF ERVA distributed-manufacturing visioning event, moves to UGA, launches the DSSI Lab, and is awarded the \$566K NSF Ethical Industry 4.0 project.
- **2022** — The team wins 1st place (\$6,000) at UB's Agrusa Innovation Competition for an interactive digital twin in cyber manufacturing; work published at ACM SenSys.
- **2021** — Launched the STREAM platform under a ~\$2.3M NSF Future Manufacturing (FMRG) award.
- **2018** — Published the foundational cyber-coordinated simulation framework for multi-stage additive manufacturing (IEEE CASE; selected as a Prominent Paper).
- **2017** — Joined the University at Buffalo as Assistant Professor.

7. Teaching & Join Us

Fix: the “Opening” nav item is empty template text. Split into two clear pages — Teaching (courses) and Join Us (recruitment) — or rename to “Join Us” and add a Teaching block on About.

Teaching

- **ENGR 8990 — AI-Agents Meet Mechanical Engineering** (UGA, Fall 2025).
- **ENGR 4670/6670 — Quality Engineering** (UGA, Fall 2025).
- **ENGR 8990 — Advanced Quality Control** (UGA, Fall 2024).
- **MCHE 4440 — Design and Control of Production Systems** (UGA, Fall 2023 & 2024).

Earlier courses at the University at Buffalo: Statistical Machine Learning for Engineers; Advanced Quality Control; Manufacturing Data Analytics; Statistics for Engineers; Facility Design & Materials Handling.

Join Us

The DSSI Lab is recruiting at every level:

- **Prospective PhD students** — email Dr. Sun your CV and transcripts.
- **Current UGA undergraduates** — year-round research opportunities.
- **Visiting scholars & postdocs** — reach out with a CV and research statement.

8. Build & QA checklist (for your student)

1. Delete the demo Publications content; transcribe §5 into `_bibliography/papers.bib`.
2. Replace the Projects page with §4 (thrusters + project tables); remove all “Image coming soon” placeholders or add real figures.
3. Add a News page wired to `_news/` using §6.
4. Add the Alumni block and postdoc to People; add the listed former undergraduates (§3).
5. Rename “Opening” → “Join Us” (and/or add a Teaching page) using §7.
6. Fix broken links: Home “Contact Us” → `/people/`; repair Chenyu Xu's LinkedIn URL.
7. Normalize all member bios to third person; standardize department names; resolve Penuel Yeboah's department.
8. Add a current PI photo to Home and People; confirm pronoun usage site-wide.
9. Add Google Scholar, ORCID, and lab email to the footer or About; consider a lab LinkedIn.

Sources: dssi-uga.github.io (all pages), the STREAM news document, and your May 2026 CV. Nothing here is invented; bracketed items need your confirmation.
